EDUCATION

University of Illinois Urbana-Champaign

Master of Engineering in Computer Engineering

- Relevant Courses: Distributed Systems, Real-World Algorithms, Communication Networks

Expected: December 2026

Champaign, IL

The University of British Columbia

Bachelor of Applied Science in Computer Engineering

2018 - 2023

Vancouver, BC

SKILLS

Programming: Java, Python, C/C++, C#, TypeScript, JavaScript, SQL, Bash

Technologies: React, Angular, Spring, Hadoop, Spark, Next.js, Node.js, Electron, Jenkins, Snyk, Autosys, Jira, Git

EXPERIENCE

Software Engineer

July 2023 - August 2025

Citi | Toronto, ON

- Reduced trade creation time by 90% for high-volume institutional users by shipping a bulk trade feature for a money market fund trading application in Java and Angular
- Engineered financial controls such as duplicate trade detection, blind re-key for trades over \$5M, maximum trade amount of \$10B, and multiple approval flow for trades over \$10M to ensure compliance and risk reduction
- Achieved 25% reduction in QA cycle time by spearheading unit test infrastructure, surpassing 80% code coverage
- Automated 400+ regression tests and distributed using Selenium Grid reducing execution time by 62%, deployed tests as a microservice on Amazon ECS

Software Engineer Intern

May 2022 - Aug 2022

Picotera Electronics | Richmond, BC

- Increased device uptime by 10% and improved emergency alerts functionality (pedestrian-vehicle safety, duplex communication) by developing firmware in C for a smart communication device
- Delivered custom Android app features such as app-whitelisting and kiosk mode using the Android Management API to manage device policies for over 50 devices used by customers

Software Test Engineering Intern

January 2021 - August 2021

NETGEAR | Richmond, BC

- Executed 10+ manual and automated tests weekly on various 3G/LTE routers across multiple product lines
- Led automation development for a newly released mobile hotspot by writing first 3 Python-based test scripts

Test Automation Development Intern

May 2020 - December 2020

IBM | Ottawa, ON

- Automated 30+ regression test cases in JavaScript using Selenium reducing manual testing load by 40%
- Improved i18n validation coverage by 100% across localized environments by developing a CSV parser tool to enable test execution across 20+ supported languages

PROJECTS

NeuroMarketing, NeuroTechX @ UIUC | Python, MATLAB, Recommendation Systems

[Github Repository](#)

- Building a neuro-adaptive ad recommendation system that integrates EEG, facial recognition and emotional modeling to personalize ad content in real time

InterPrep (NeuroHack 2025) | Next.js, Google MediaPipe, TypeScript

[Github Repository](#)

- Built a real-time mock interview platform using Next.js that analyzes non-verbal communication during behavioral interviews, providing actionable feedback on eye contact and facial expressions
- Implemented computer vision pipelines using Google MediaPipe to compute Eye Contact and Expression Scores from live webcam streams, enabling immediate, quantitative user feedback

Distributed File System & Stream Processor | Java, Hadoop, Apache Spark

[Github Repository](#)

- Designed and built a fault-tolerant distributed file system and stream processing engine, achieving 10,000 tuples/sec throughput and 70ms file re-replication latency under failures across 10 nodes
- Implemented leader-based coordination with consistent hashing and quorum-based reads/writes to ensure strong consistency and automatic rebalancing under varying workloads improving performance
