EDUCATION

University of Illinois Urbana-Champaign

August 2025 - December 2026

Master of Engineering in Computer Engineering

CGPA: 3.6/4.0

- Relevant Courses: Distributed Systems, Real-World Algorithms, Artificial Intelligence

The University of British Columbia

September 2018 - May 2023

Bachelor of Applied Science in Computer Engineering

CGPA 3.5/4.0

EXPERIENCE

Software Engineer

July 2023 - August 2025

Citi | Toronto, ON

- Reduced trade creation time by 90% for high-volume institutional users by owning and shipping a bulk trade feature for a high-throughput money market fund trading application in Java and Angular
- Designed financial safeguards such as duplicate trade detection, blind re-key for trades over \$5M, maximum trade amount of \$10B, and multiple approval flow for trades over \$10M to ensure compliance and risk reduction
- Cut QA cycle time by 25% by spearheading unit test infrastructure, driving code coverage from 0% to 80%
- Automated 400+ regression tests and distributed using Selenium Grid reducing execution time by 62%, deployed as a containerized microservice on Amazon ECS
- Mentored incoming engineers and 2 interns through onboarding by scoping starter tickets, conducting code reviews, and leading architectural discussions with operations stakeholders.

Software Engineer Intern

May 2022 - Aug 2022

Picotera Electronics | Richmond, BC

- Increased device uptime by 10% and improved emergency alerts functionality (pedestrian-vehicle safety, duplex communication) by developing firmware in C for a smart communication device
- Delivered custom Android app features such as app-whitelisting and kiosk mode using the Android Management API to manage device policies for over 50 devices used by customers

Software Test Engineering Intern

January 2021 - August 2021

NETGEAR | Richmond, BC

- Developed and executed automated test scripts in Python for 3G/LTE routers across multiple product lines
- Diagnosed low-level network issues across TCP/IP, analyzing packet traces during router testing using Wireshark

Test Automation Development Intern

May 2020 - December 2020

IBM | Ottawa, ON

- Automated 30+ regression test cases for IBM Cognos Analytics, a large-scale enterprise BI platform, reducing manual testing load by 40% using Selenium in JavaScript
- Improved i18n validation coverage by 100% across localized environments by developing a CSV parser tool to enable test execution across 20+ supported languages

PROJECTS

Distributed File System & Stream Processor | Java, Hadoop, Apache Spark

[Github](#)

- Designed and built a fault-tolerant, stateful distributed file system and stream processor achieving 10,000 tuples/sec throughput and 70ms re-replication latency under node failures across a 10-node cluster
- Implemented leader-based coordination with consistent hashing and quorum-based reads/writes to ensure strong consistency and automatic rebalancing under varying workloads improving performance

InterPrep | Next.js, TypeScript, Postgres, Gemini API, OAuth, Google MediaPipe, Playwright

[Live Demo](#)

- Built an AI-powered interview prep platform, combining real-time computer vision feedback, in-browser code execution, and AI-generated coaching to help candidates practice behavioral and technical interviews end-to-end
- Designed a 3-layer data persistence architecture, delivering a zero-latency user experience with no risk of data loss

SKILLS

Programming: Java, Python, C/C++, C#, TypeScript, JavaScript, SQL, Bash

Technologies: React, Angular, Spring, Hadoop, Spark, Next.js, Node.js, Postgres, Playwright, Vitest, Selenium

Tools: AWS (ECS), Azure, GCP, Git, GitHub Actions, Jenkins, Synk, Autosys, Jira, Claude Code, Gemini API
